Kompally, Telangana - 500100, India

OBJECTIVE

An ambitious and detail-oriented computer science engineering student with a strong foundation in software development and AI technologies. Seeking an opportunity at a company where I can apply analytical and problem-solving skills in building scalable solutions, while continuously learning and contributing to innovation-driven projects in a collaborative environment.

EDUCATION

- Malla Reddy College of Engineering and Technology** 2022 – 2026
B.Tech in Computer Science and Engineering GPA: 9.48/10.00
- Sri Chaitanya Junior Kalasala** 2020 – 2022
Senior Secondary (Class XII) Grade: 95.6%
- Hi-Tech Modern Res. H.S** 2020
Secondary Education (Class X) GPA: 10/10

SKILLS

- Programming Languages:** Python, Java (Basics), SQL
- Web Technologies:** HTML, CSS, JavaScript
- Machine Learning Tools:** TensorFlow, Keras, OpenCV, NumPy, Pandas, Matplotlib, Scikit-learn
- Soft Skills:** Leadership, Problem Solving, Team Collaboration

EXPERIENCE

- Infosys Springboard Virtual Internship 6.0** | | | | Aug 2025 – Oct 2025 Remote
Project Intern – Intelligent Quiz Management System with Auto-Generated Questions
 - Developed an AI-powered quiz system using Python, Django, and Gemini AI for automated question generation.
 - Implemented RESTful backend services for quiz creation, scoring, validation, and result processing.
 - Designed database models using Django ORM to manage users, question banks, and assessments.
- AICTE TechSaksham Internship — Edunet Foundation** | | | | Jan 2025 – Feb 2025 Remote
Machine Learning Research Intern – AI Health Assistant
 - Engineered an AI-based healthcare model using Hugging Face Transformers, improving prediction accuracy by 12%.
 - Reduced false positives by 15% through model fine-tuning and medical data preprocessing.
 - Built a Streamlit-based dashboard for real-time insights, cutting analysis time by 20%.

PROJECTS

- Software Project Cost Estimation: AI-Based Prediction System** Jun 2025 – Aug 2025
Tools: Python, TensorFlow, XGBoost, LightGBM, Plotly Dash
 - Developed a predictive system to estimate software project costs using machine learning and deep learning models.
 - Implemented Deep Neural Networks, XGBoost, and LightGBM for model training and performance optimization.
 - Built a Plotly Dash dashboard for real-time cost analysis and visualization, reducing manual estimation errors by 25%.
- Lost and Found App: Android-Based Item Recovery System** Feb 2025 – Apr 2025
Tools: Android, Java, Firebase, XML
 - Developed a mobile application for reporting and retrieving lost items with secure user authentication.
 - Implemented Firebase-based real-time database and authentication for storing and managing user records.
 - Created efficient search and filtering features to enable quick item discovery and claims, reducing item retrieval time by 30%.

CERTIFICATIONS

- Infosys Springboard – Java Programming Fundamentals & Front-End Web Development
- Intel Unnati Lab – Machine Learning Training
- Cambridge University Press – English Empower Level C1
- University of Michigan (Coursera) – Programming for Everybody (Python)
